Step 1: Problem Identification (What is the problem?)
Student present level of performance:

Expected student level of performance:

Magnitude of discrepancy:

Problem definition:

Replacement behavior or target skill:

Step 2: Problem Analysis (Why is it happening?)

| Domain | Relevant Known Information |
| :--- | :--- |
| Instruction <br> (e.g., pacing, corrective feedback, explicitness, <br> opportunities to practice, engagement, etc.) |  |
| Curriculum <br> (e.g., skills taught, instructional materials, scope <br> and sequence, expected outcomes, previous <br> interventions, etc.) |  |
| Environment <br> (e.g., room set-up, peer influence, expectations <br> and rules, behavior management system, etc.) |  |
| Learner <br> (e.g., academic skills, behavioral concerns, etc.) |  |

Based on the above information (instruction, curriculum, environment, and learner) why do you think the current problem is occurring and what is the predicted result of an appropriately matched intervention?

Problem Hypothesis: The problem is occurring because

Prediction: The problem will be reduced if

## Data used to validate hypothesis:

Do you have enough information to complete the problem analysis and develop an intervention? If no, what else is needed and who will be responsible for collecting it?

## Step 3: Plan Development (What are we going to do?)

Target skill: $\qquad$

Goal (This intervention will be successful if...):
$\qquad$
What will be done? (actions taken, target skills taught, curriculum/materials used)

How will it be done? (instructional strategies, etc.)
$\qquad$
Who is responsible? $\qquad$ Where will it occur? $\qquad$
How often? ___
Group size $\qquad$
Progress monitoring plan $\qquad$

What materials will be used? $\qquad$

Who is responsible?
How often? $\qquad$
